

# Ready, Data, Open!

<https://bd.hack4socialgood.ch/event/2>

Open Data for Research and Open Research Data are hot topics! From new laws advanced in government, to new requirements for reproducible science and Open Access publication, this workshop is for anyone who likes getting lost in a library - or in the greatest library of all, the Internet. What are key steps in obtaining Open Data for reuse in research? What key questions does one need to know in publishing open data

(licences, formats, metadata, feedback, ...). How do data catalogues, data portals and open government projects work? In this workshop, you will learn about the different phases of implementation, get answers to common questions and more. If you have never heard of DCAT-AP, JSON or APIs, you are in the right place! Join us to learn the key concepts, take part in a hands-on practice session, and be referred to numerous further sources.

*Eine Datenexpedition ins Land der  
Wissensschätze*

1. Remix culture. (*Kultur des Teilens*)
2. Institutional support.
3. Guidelines and pedagogical recommendations.
4. Collaborations within academia and nationally.

## Terms of use

The terms of use for datasets of the federal authorities on opendata.swiss are determined by the existing legal framework. If there is a statutory requirement to cite the source, this is indicated by the appropriate symbol next to the dataset concerned. In all other cases, users are recommended to cite the source.

The symbols next to each dataset indicate what use is permitted. All data owners use the same symbols.

### Open use

- You **may** use this dataset for non-commercial purposes.
- You **may** use this dataset for commercial purposes.
- You are **recommended** to provide the source (author, title and link to the dataset).

Open use. Must provide the source.

# #FeedbackLoops

The image shows a screenshot of a Twitter thread. On the left is a vertical navigation bar with icons for home, search, notifications (6), messages (1), bookmarks, lists, profile, and a menu. The main content area shows a tweet from Oleg Lavrovsky (@loleg) posted 5 hours ago. The tweet text is: "Search and subpages on [opendata.swiss](https://opendata.swiss) are unfortunately down this morning.. @opendataswiss #pleasefixit". Below the text is a screenshot of a web browser displaying an "Internal Server Error" page from <https://opendata.swiss/en/group/geography>. The error message reads: "The server encountered an internal error or misconfiguration and was unable to complete your request. Please contact the server administrator at root@localhost to inform them of the time this error occurred, and More information about this error may be available in the server error log." Below the screenshot are icons for replies (2), retweets, likes (1), and a share icon. A reply from @opendataswiss is visible, stating: "Replying to @loleg We are already working on the problem. Thanks for".

## Government Budget

65% open

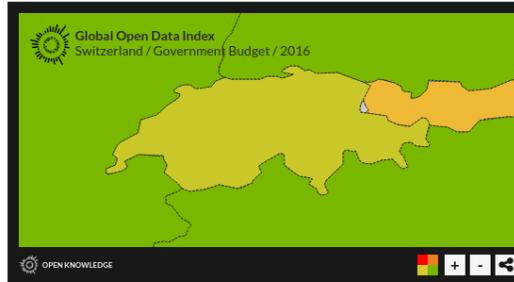

Switzerland

Share this page

See other years: [2013](#) | [2014](#) | [2015](#)

Note: The methodology used in the Global Open Data Index has changed over time; significantly so between 2015 and 2016. For this reason, the results are not directly comparable over time.

### What data is expected?

National government budget at a high level, that is the planned government expenditure for the upcoming year, and not the actual expenditure. Open budget data allows for well-informed publics: showing where money is spent on, how public funds develop over time, and why certain activities are funded. We recommend that you consult our methodology section for more information.

- Budget per government department
- Budget per sub-department
- Descriptions for budget sections

### How open is the data?

It's not openly licenced

It's up-to-date

It's in an open and machine-readable format

It's publicly available

It's not downloadable at once

It's available free of charge

Meta data

# #BetterMetaData

The screenshot displays the 'Data Package Creator' interface. On the left is a sidebar with navigation buttons: 'Upload', 'Validate', and 'Download'. Below these are sections for 'Metadata' (Name: productions, Title: Productions, Profile: Tabular Data Package, Description: Describe your dataset, Home Page: https://example.com, Version: 1.0.0, Author: J Bloggs), 'Resources', and 'Preview'.

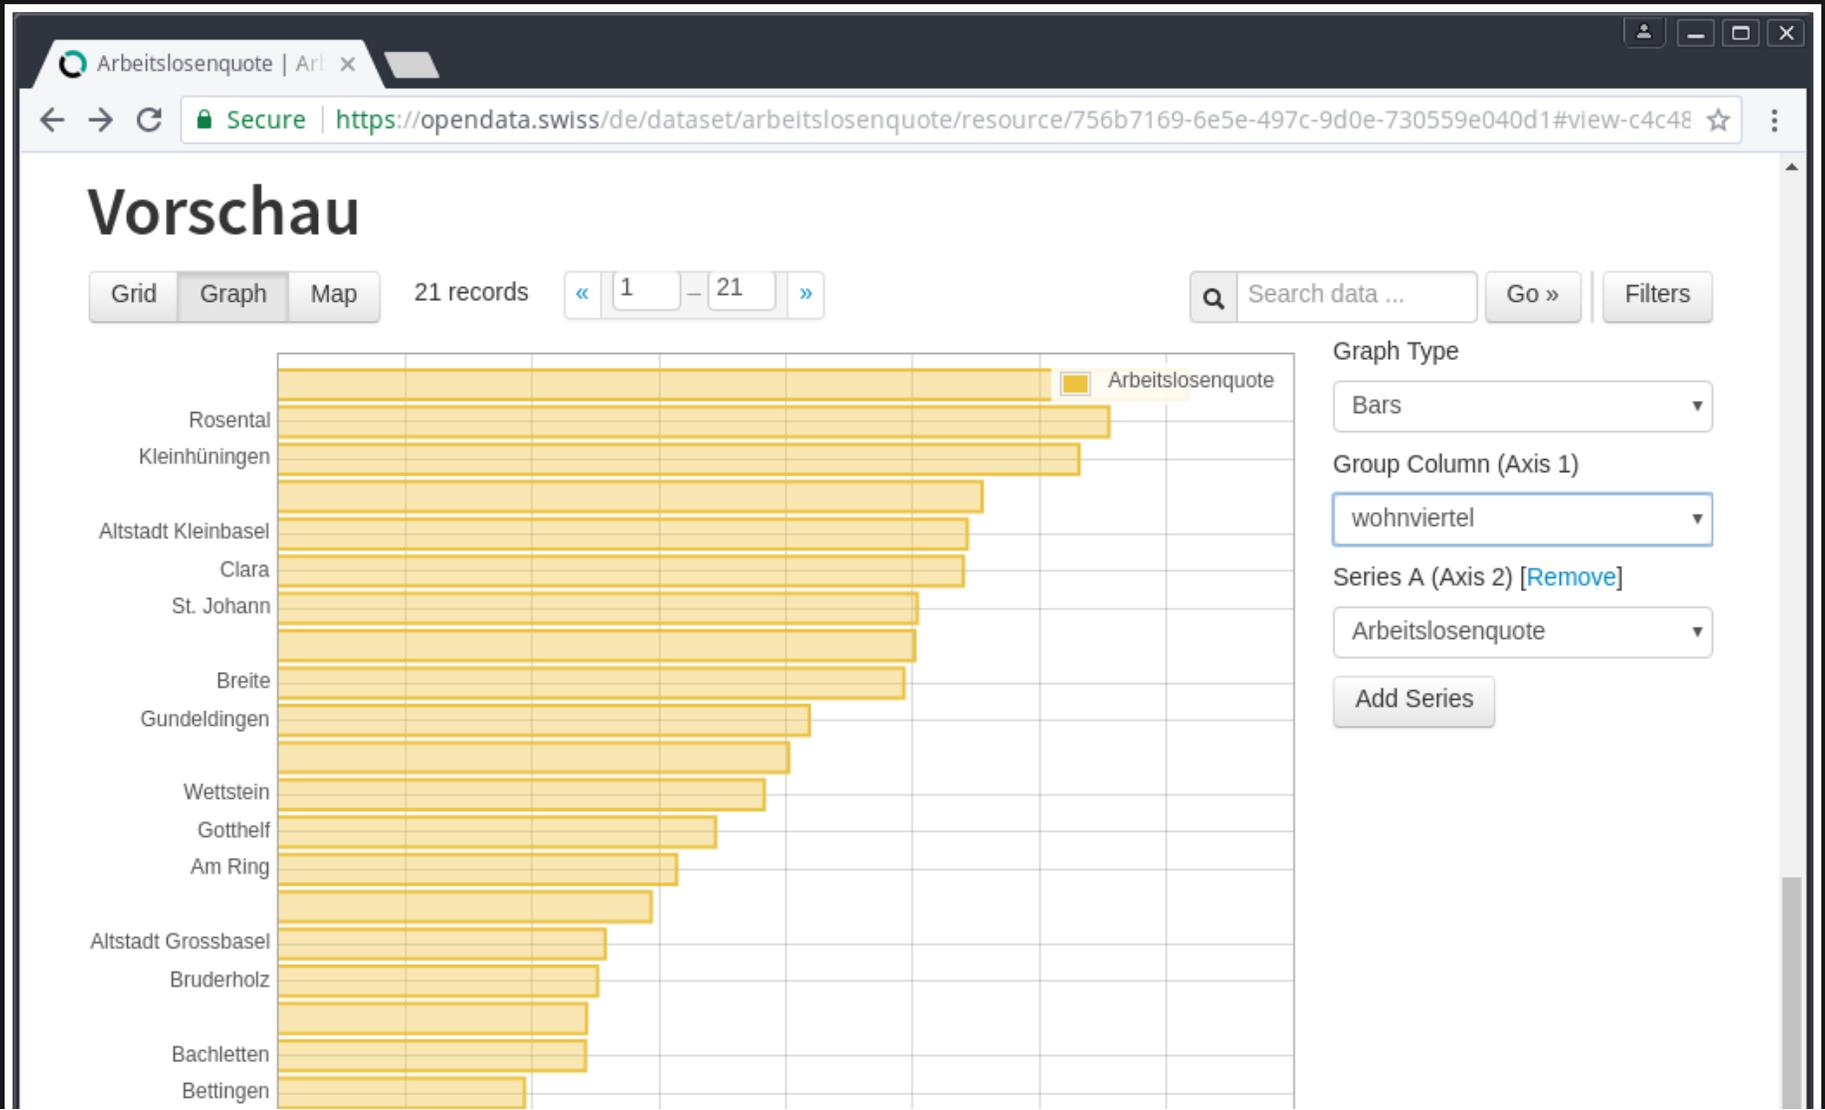

The 'Resources' section shows a table of metadata fields for the 'productions' dataset, with the path 'production.csv'. The fields are:

Name	Value	Data Type	Data Format
id		integer	default
title		string	default
notes		string	default
release_date_date		date	%Y-%m-%d
release_date_precision		string	default
created_at		string	default

The 'Preview' section shows the resulting JSON metadata:

```
{
  "bytes": 18464,
  "count_of_rows": 73,
  "hash": "d23556fc6120ad6fbb8d0dad13",
